

Lab 3

Git Cheat Sheet

<https://www.atlassian.com/dam/jcr:8132028b-024f-4b6b-953e-e68fcce0c5fa/atlassian-git-cheatsheet.pdf>

Use the same github repo “DigitClassification”

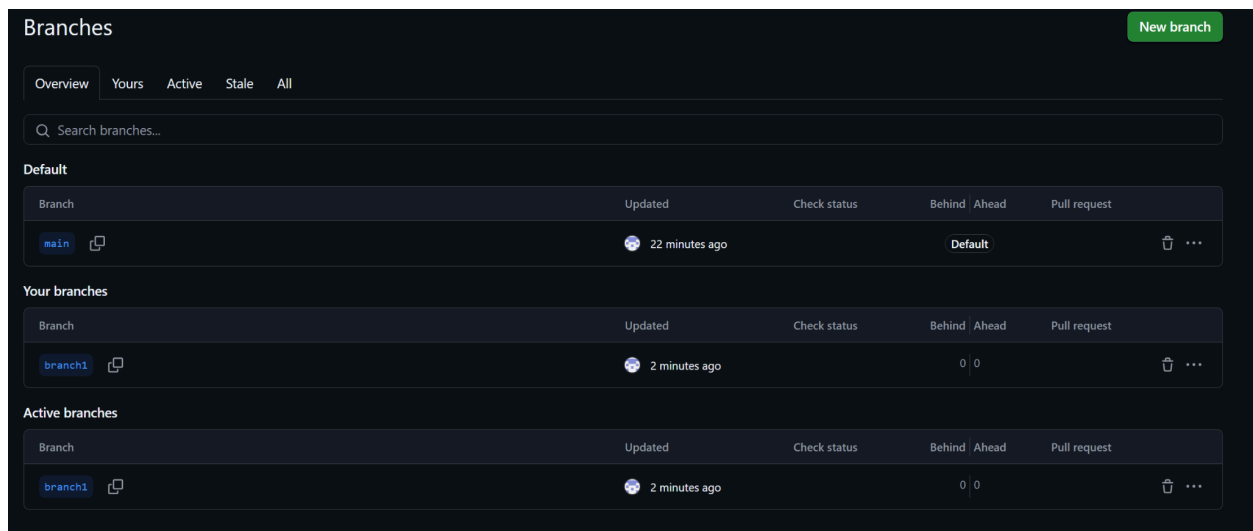

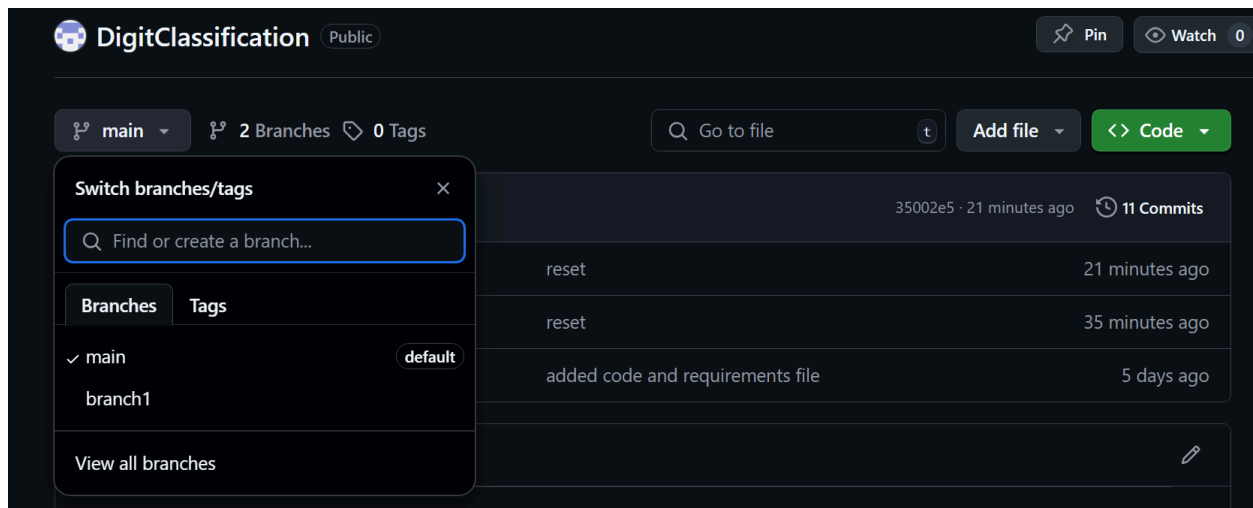

Create a New Branch and Switch to It

git checkout -b branch1

git push

//doesn't work - The current branch branch1 has no upstream branch.

git push --set-upstream origin branch1

Modify files in the branch and update branch

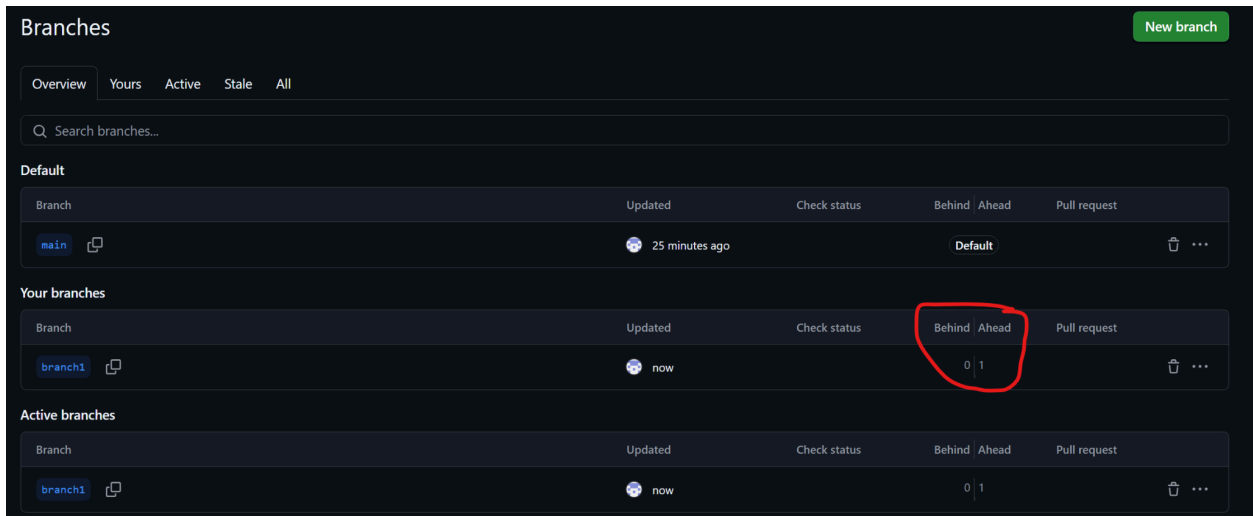

Modify README.md

```
git add README.md
```

```
git status
```

```
git commit -m "updated readme in branch1"
```

```
git push
```

The screenshot shows the GitHub 'Branches' page. At the top right is a green 'New branch' button. Below it are tabs for 'Overview', 'Yours', 'Active', 'Stale', and 'All'. A search bar is present. The 'Default' section shows the 'main' branch as the default. The 'Your branches' section shows 'branch1' with a status of '0 | 1' in the 'Behind / Ahead' column, which is circled in red. The 'Active branches' section also shows 'branch1' with the same status.

Branch	Updated	Check status	Behind / Ahead	Pull request
main	25 minutes ago		Default	
branch1	now		0 1	

Merge branch with main branch

```
git checkout main
```

```
git merge branch1
```

```
git push
```

Delete branch

```
git branch -d branch1
```

```
git status
```

```
git push
```

Is it deleted now?

git push origin --delete branch1

Re-Factoring Code

Code cleanup for better reuse, reduce redundancy

TASK:

- Create a New Branch
- Refactor the code to move all processing into separate functions
- Every code line outside functions should be just function calls
- Move all these functions to a utils.py file and import it
- Push the changes to the branch
- Submit repo link at

https://docs.google.com/forms/d/e/1FAIpQLSd_Kzk-S1vmJEaFMq9WHdwgyuZGpUqFCTT_0T9rCdInpoEjYw/viewform?usp=dialog
